☐ CSE 425

☐ CSE 715

☐ EEE 474

What are the lacking of MLP's for current computer vision tasks ? How authors proposed to overcome such process

Your answer

What do you understand by convolutional tokenizer? How it is used with MLP and made CONV MLP

Your answer

What are the datasets the authors experimented upon ? Did they try some different domain datasets or similar domain datasets. Try to mention all.

Your answer

Object detection and Semantic segmentation are difficult in the traditional MLP depicted by the authors. Explain with example why they are difficult and how Conv-MLP overcome it

Your answer

Visual representation learned by Conv-MLP can be seamlessly transferred and achieve competitive results with fewer parameters. What are the parameters the authors used to achieve such remarkable results?
